

Secure your company's data & future with...

eStorage

Online data backup

As an electronic storage provider, dBGlobal offers online data backup for business and individuals worldwide. Our own proprietary software and service create an entirely new, more advanced, business model for the traditional offsite data storage and protection industry.

Business continuity

dBGlobal's premier 'eStorage' service provides regular, reliable, automated backup and electronic storage to its customer base to ensure business continuity.

Encrypted transport of data

Utilising industry-leading, in-house software, eStorage automatically identifies any changes made to files then transfers only those changes via an encrypted tunnel, using 2048 bit SSH Blowfish technology. This advanced method of data transportation is unique to dBGlobal as it enhances security whilst also compressing the data stream to minimize client's transmission cost and time.

Offsite data storage

Clients' data is then stored in multiple, fully synchronised, state of the art, highly secure, Tier 1 offsite data centres. To further securitise our clients' data, it is guarded by our own 'best of breed', proprietary 2048 bit Blowfish Cryptosystem, as well as other additional security, such as industrial strength firewalls and intruder detection software.

Online retrieval

Fully automated, hands-off backup sessions can be easily scheduled by customers according to their own needs. Retrieval can be accomplished online, in real time, remotely from anywhere in the world by simple use of the web interface, which is again secured by another 128 bit SSL connection.

Self Storage

To cater to SME demand, dBGlobal has produced a possible 'world first' by offering customers the ability to electronically store their data to themselves via pre-configured mini servers strategically placed in a 2nd office or proprietors home. Clients can utilize all the advantages and functionality of electronic storage yet maintain complete control of their data.

Customised or data redirection

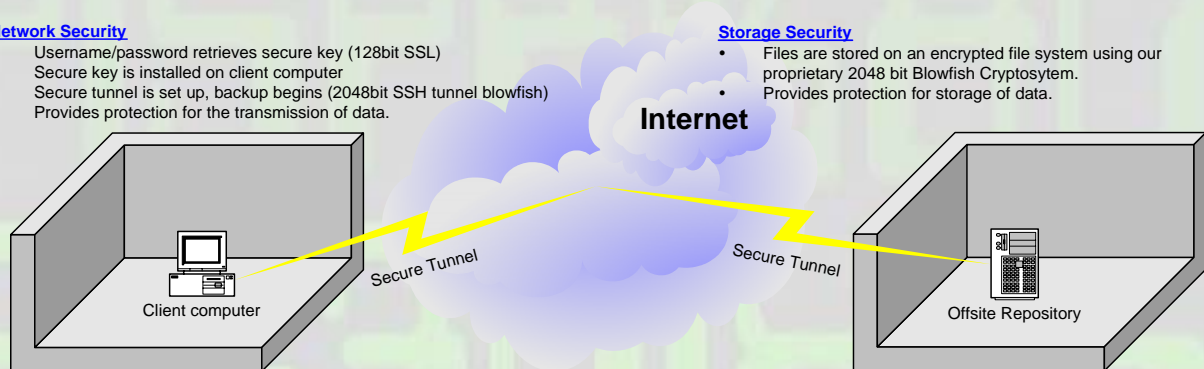

dBGlobal also offers their eStorage service as either a customized, or 'turn key', solution for those who wish to utilise their own infrastructure or take advantage of differing geographical offices. Data can be redirected to the destination of choice, yet still enjoy the impressive security features, functionality and its ease of use.

Network Security

- Username/password retrieves secure key (128bit SSL)
- Secure key is installed on client computer
- Secure tunnel is set up, backup begins (2048bit SSH tunnel blowfish)
- Provides protection for the transmission of data.

Storage Security

- Files are stored on an encrypted file system using our proprietary 2048 bit Blowfish Cryptosystem.
- Provides protection for storage of data.

Pricing

\$30 per gigabyte per month

dBGlobal **ONLY** charges for storage space at **\$30** per Gigabyte per month for the first 10 Gigabytes, after which each extra Gigabyte is only **\$10** per month. The Self Storage option is priced at a fixed rate of **\$250** per month irrespective of stored or transferred amount. All charges are in Australian Dollars (excluding GST).

Why choose dBGlobal?

Exports to USA, Canada and Europe

Unlike many competitors who resell foreign systems (that adds to their price), dBGlobal's eStorage service is so superior, unique and advanced, that it is exported to the USA, Canada, Asia & Europe.

Delta blocking

dBGlobal's eStorage uses an advanced form of delta blocking, which only transfers the actual changes to individual files. Any systems that transfer whole files are cumbersome and inferior as they actually add to storage costs and increase transmission time.

Simple pricing

dBGlobal's pricing policy is simple. There is NO guessing or pre-booking of possible monthly/yearly amounts, NO set up costs, NO license fees, NO bandwidth costs, NO set monthly limits and definitely NO penalties for exceeding limits. These, and complicated pricing plans should NOT be paid for state of the art services. dBGlobal offers a cheap, simple insurance policy against mishaps.

Don't Prepay

Locked in, prepaid yearly plans with limits prey on the naive client. A fairer, more simple concept is to pay for the storage (disc space) utilised, just like the physical storage market. dBGlobal's *eStorage* uses this idea to offer a smarter business alternative.

SMS Error messages

Not only does dBGlobal send confirmation emails, but are the only known storage provider that sends an SMS text message on transmission errors to the client's mobile phone of choice.

FAQ's

What operating systems are supported?

All versions of Windows systems are supported natively: *Windows 95, 98, NT, 2000, ME and XP.*

How does the reliability compare with that of tape backups?

No comparison. The *eStorage* service is much more reliable than any tape backups. A major risk of tape systems is that even when all indicators point to successful backups, the restore fails. Secondly, most companies using tape systems don't employ a secondary fail-safe system. Our system has redundancy built in. *eStorage* also eliminates the greatest worry, human intervention.

Can I trust the Internet?

The Internet is perfectly safe for your data if the right safeguards are in place. We include a combination of data encryption, access control, secure infrastructure and account management within our service setting. With this structured combination, you can be certain that unwanted hackers do not have access to your backup data.

Can I store and restore laptop data from remote locations?

Yes. Incremental storage via modem (wireless or cabled) is a quick and effective method of protecting your files whilst travelling.

Can another customer look at my data?

No. Your data is protected by a combination of access control (restricting system connections to valid users) and data encryption (based on a key known only to you). Your data is safer with an online data protection service provider than in any other off-site storage. Only authorised users and those who have shared your secret encryption key can view your data.

Am I confined to the same computer that I backed up from when restoring data?

No. dBGlobal's service is truly global as it is able to be restored anywhere in the world via the web interface. It is only a matter of visiting the dBGlobal website and entering your own *username* and *password* to access your relevant encrypted data.

How do I get started with dBGlobal?

Complete the order form and Client Agreement on the dBGlobal website www.dbglobal.net, contact dBGlobal by telephone +61 (0) 404 837 663 or by emailing dBGlobal on storageking@dbglobal.net. Even though the software is developed for ease of understanding and use, our experts are always willing to explain the process and answer of your questions and even guide you through installation.

About dBGlobal

Australian

dBGlobal is a proud Australian based incorporated company that provides a unique and balanced approach to the ever engulfing technology environment that is business today.

No technobabble

dBGlobal delivers innovative IT security products and services to our clients without any mysticism or technobabble.

Simple, easy and smart

dBGlobal's offerings are simple to operate and easy to understand, yet are designed to not only protect a clients business but generate profit, enhance ROI, reduce costs and above all encourage smart business.

Adapts to change

dBGlobal develops and utilises the most advanced security techniques which incorporate new software and hardware features as such technology evolves and becomes available.

Security is paramount

Security on the Internet is a major concern and of the highest priority for dBGlobal. Trust your IT security to dBGlobal.
